

Dear Parents OFHS Students:

The Math Department would like to welcome you to Olmsted Falls High School! In order to help our students have a positive and successful math experience, we require all students to own a graphing calculator. A graphing calculator will be used in all 4 years of their OFHS math courses, and should also be more than adequate for any college level work after high school. We realize there is a cost involved but we're hoping you see it as an 8-year educational investment in your son or daughter.

There are several options for graphing calculators listed below. If price is not a concern, the TI Nspire (blue calculator with 2 face plates) is a great option. However, any of the TI 84s or TI 83s will be more than adequate for our high school courses. These calculators can be purchased at many local stores like Office Max, Staples, or Target, or online at Amazon.com or CopcoInc.com. Used ones at a reduced price can usually be found online at eBay or Craigslist as well. Please feel free to contact us if you have any questions!
